Olu Fadipe Web Design

A screenshot of a MacBook Pro displaying a code editor window for the file `functions.php`. The code is written in PHP and handles user registration. It includes logic for loading templates, handling form submission, and validating input fields like email and password. The code editor interface shows the file structure on the left and the code content on the right, with syntax highlighting for PHP and comments.

The image shows a MacBook Pro with a code editor open in the foreground. The editor is displaying PHP code for a registration form. The code includes functions for loading templates, handling registration forms, and validating user input. The interface shows a file tree on the left and the code editor on the right. The status bar at the bottom indicates various application icons.
